Write the abstract here. Max 1 page. A good abstract should contain balanced material from each and every chapter of the thesis. Use the following as a checklist for your abstract:

Motivation:

Why do we care about the problem and the results? Avoid unnecessary words like “In this thesis”.

Problem statement:

What problem are you trying to solve? What is the scope of your work (a generalized approach, or for a specific situation)? In some cases it is appropriate to put the problem statement before the motivation, but usually this only works if most readers already understand why the problem is important.

Approach:

How did you go about solving or making progress on the problem? Did you use simulation, analytic models, prototype construction, or analysis of field data for an actual product? What was the extent of your work? Put the result there, in numbers. Avoid words such as “very”, “small”, or “significant.”

Conclusions:

What are the implications of your answer? Are your results general, potentially generalizable, or specific to a particular case?

Keywords: Key one, key two.
